

Wildflower Roof Turf

Wildflower Roof Turf has been developed by the company using its unique 'soil-less' system that is more drought tolerant than the landscape product. It easy to handle and delivers a guaranteed wildflower environment on a roof. The roof turf is made up of 34 UK native wildflowers and grasses, with a minimum of 50% wildflowers. This product can be used in conjunction with our unique Wildflower Roof Substrate. This substrate has been developed to support plant growth whilst free-draining and is lightweight.

Key Product Points

- A UK native Wildflower Turf suitable for green roof applications.
- All green roof applications from 10m² to 10,000m².
- Developed to minimise irrigation and to thrive in this particular environment.
- Shade tolerant.
- Low Maintenance – one cut per year.

Typical Applications

- Public buildings
- Private houses
- Garden buildings
- Garages
- Containers
- Wall capping

Specification

Maintenance

Cutting Cycle: Once every autumn (summer cut optional)

Watering: For the first two weeks to prevent turf from drying out. After which just the odd soak in long periods of dry weather. Consider irrigation

Properties (approx.)		
Product Code		
Product Weight	kg/m ²	20
Product saturated Weight	kg/m ²	35
Width and Length (rolled)	m	0.77 x 1.62 (1.25m ²)
Established Growth height (minimum)	mm	300
Established growth height (maximum)	mm	750

Wildflower Roof Turf

Latin Name	Common Name
